

Reports in v2.1

The reporting server is a very powerful instrument to create reports on changes in the IDM engine as well as about historical object data. The report can be created on the fly with the integrated **report wizard** or created and modified with the build-in **report editor**.

Report Selection	
 The screenshot shows the 'Reporting' section with the title 'Reporting' in blue. Below it, there's a section 'Search / Select a Report:' with a sub-label 'Filter Reports by Name:' and a text input field. Underneath is a list of 'Available Reports' with the following items: Default Role Assignment Report, Default Audit Report, Default Groups Report, Default Resource Report, Default Role Report, Default User Role Report, and Default Users Report. The 'Default Users Report' is highlighted. At the bottom is a blue button labeled 'Select Report'.	Select one of the predefined reports, that the Audit & Compliance Dashboard offers. These are • Default Audit Report • Default User Report • Default Group Report • Default Role Report • Default Resource Report • Default User-Role Report • Default Role-Assignment Report • Driver Report (in development) • Workflow Report (in development)
Index Selection	
 The screenshot shows the 'Reporting' section with the title 'Reporting' in blue. Below it, there's a section 'Select Data for the Report Default Users Report' with a sub-label 'Filter Indexes by Name:' and a text input field. Underneath is a list of 'Available Indexes' with the following items: Default 2016.10.27, Default 2016.10.11, Default 2016.09.23, Default 2016.08.03, Default 2016.07.29, and Default 2016.07.28. The 'Default 2016.07.28' is highlighted. At the bottom is a blue button labeled 'Select Index'.	Index Selection for object reports For reporting on directory objects such as users, groups, roles, or resources you have to select one or more indexes you want to take the data from. You're free to report on any historical data you have.

Select Index

Index Selection for audit reports

To create a report on audited events you first have to select the historical timeframe you want to use to build the audit report. You can select as many historical indexes as you'd like. In the report filter, you can refine the time period.
